

Exercício Arduino/Java

Valmir Cardoso Ribeiro

```
int ledPin = 13;
int porta;

void setup() {
    Serial.begin(9600);
    pinMode(ledPin, OUTPUT);
}

void loop() {
    if (Serial.available() > 0) {
        porta = Serial.read();
        switch(porta){
            case 1:
                digitalWrite(ledPin, HIGH);
                break;
            case 2:
                digitalWrite(ledPin, LOW);
                break;
        }
    }
}
```
